Nashua River Watershed Municipal Vulnerability Preparedness (MVP)
Natural Climate Solutions Project

First Community Meeting in Groton, MA

February 1, 2024

NASHUA RIVER WATERSHED ASSOCIATION

BSC GROUP

Regenerative DesignGroup

This project is funded by the Massachusetts the Executive Office of Energy and Environmental Affairs (EEA) Municipal Vulnerability Preparedness Program.

NRWA Conservation and Climate Resilience Specialist, Sara Singh, welcomes attendees and introduces the agenda for the First MVP Community Meeting at the NRWA River Resource Center in Groton.

Adrienne Lennon, with the consultant BSC Group, gave an introductory presentation on the project and the concept of Nature-based Solutions as a way to address the negative impact of climate change in the community.

Stacey Chilcoat, NRWA Education Director, introduces the objective for the small break-out groups: to identify areas in the community that they feel are impacted by climate change; mark those areas on maps that were provided; and discuss prioritization of locations most in need of intervention.

Small Break-out Groups

The small groups met to review maps of the community, discuss negative climate impacts such as flooding, heat islands, and polluted storm run-off during intense rain events. Using the maps, group members identified areas in the town being impacted by climate change that could benefit from Nature-based Solutions.
