Site Study Ashburnham: South Branch of Souhegan River

About this site: The South Branch of the Souhegan River (1) flows northward from Marble Pond (just below the bottom of this map) under Old Ashby Road (2) and into Billy Ward Pond (3) before continuing northward into southern New Hampshire. This area is an important ecosystem that serves as a habitat for Blanding's Turtles, and also as a connectivity node for many flora and fauna.

Community concerns about South Branch of Souhegan River

From Rindge Turnpike (4) to the intersection of Old Ashby Road (2) and Old Steele Road (5), flooding can inundate the roadway.

Flooding tends to occur between Marble and Billy Ward Ponds on Ashby Road; the culvert here may be in danger of collapse.

Nature-based Solutions Recommended for Ashburnham: South Branch of Souhegan River

Recommended NbS
NbS #s correspond to Project Templates referenced on pages 3, 6, & 7 of Site Study

1. South Branch's Souhegan River
   - F #21 Beaver deceiver/promotor
   - F #5 New wetland or floodplain construction/expansion
2. Souhegan River under Old Ashby Rd
   - F #15 MSCS Culvert Improvement
   - B #20 Species Crossing Protections
3. Old Ashby Road
   - • #30 Pedestrian Safety and Bike Access
   - F #17 Pervious parking/walking areas
4. Residential Neighborhood
   - B #8 Pollinator hedgerow buffer

Pink overlay is FEMA 500 year floodplain

Recommended NbS Key

- F Flooding NbS
- D Drought NbS
- RT Rising temps NbS
- DW Degraded water NbS
- DL Degraded landscape NbS
- B Loss of biodiversity NbS

NbS Narrative/NbS Project Templates for Ashburnham: South Branch of Souhegan River

NbS Recommendations

- Recommend removing asphalt in this area and creating either a dirt roadway section or a one lane road that will slow down traffic to protect Blanding's Turtle habitat and enhance water infiltration.
- Beaver deceivers could be installed where the culverts are located.
- Undersized culverts should be enlarged and unburied to meet MA River and Stream Crossing Standards for wildlife.
- The Conservation Commission received a letter from the property owner saying that the culvert on Ashby Road caused problems and created wetlands, but old maps show pre-existing wetlands. If the culvert has a structural integrity issue, then that should be attended to.

NbS Project Templates for Site Specific NbS Recommendations on previous page

Resource 1 - How to Use Templates

Resource 2 - Next Steps in Planning & Permitting

The following template numbers correspond to the NbS recommendations on the page 2 Map.

#5 Wetland or Floodplain Construction- Expansion

#8 Pollinator Hedgerow Buffer

#15 MSCS Culvert Improvement

#17 Pervious Parking- Walking Areas

#20 Species Crossing Protections

#21 Beaver Deceiver/Promoter

#30 Pedestrian Safety and Bike Access

Soils Information for Ashburnham: South Branch of Souhegan River

Ashburnham

Large amounts of high functioning soil and its position high in the watershed highlight the importance of protecting soil health in Ashburnham.

Ashburnham stands out among the five focus communities as having a particularly large acreage of high functioning soils that are storing over 2 million metric tons of soil organic carbon (SOC). The richest deposits of SOC are found in the wetland systems that extend from the town's major lakes. The 21,170 acres of "high function/high carbon" soils represent 80% of the town's land area and is about 3 times as much area of high functioning soil as the average in the other 4 towns. Ashburnham straddles two major watersheds with the lands to the southeast of town ultimately draining to the Nashua River, and this position highlights the town's importance in protecting and managing soil health to prevent unwanted downstream effects like flooding and poor water quality. Compared to the other four focus communities, the town has limited areas of degraded soils with potential for regeneration (just 5.7% of the land area is classified as having high regeneration potential because of the relatively little soil disturbance in Ashburnham).

Sites Considered for Nature-based Solutions

Despite having such large area of high functioning soil, several sites that see seasonal flooding have been identified in this project. The sites selected for potential Nature-based Solutions are largely nearby water bodies or streams in areas where soil function has been degraded. Efforts to increase soil capacity to store or slow stormwater flow in these locations may have a positive impact and be important demonstration sites. These site specific interventions should be complemented by efforts to conserve and protect important healthy soil resources throughout the town's forested uplands and the wetlands extending from the town's large water bodies.

Priority Actions for Protecting/Enhancing Soil Health in Ashburnham

Increased protection and climate forward management of wetlands and forests.

Example Nature-based Solutions:

- Land acquisition and conservation easements
- Forested upland protection district (see Deerfield example, appendix 1)
- Transfer of development from rural to infill locations, including across town borders (See Deerfield example, appendix 1)
- Forest tree planting to increase climate-adapted species abundance and total stock and to preserve forest structure
- Improving local bylaws for wetland protections

#	SITE	PREDOMINANT SOIL FUNCTIONS FOR RESILIENCE			
		Highly Degraded	High Regeneration Potential	Moderate-Low Function	High Function
1	Phillips Brook/Residential Area on Main St.	◆	◆		◆
2	Pump Station			◆	
3	Sweeney Park	◆	◆		
4	Dump/Transfer Station			◆	
5	Page Ave		◆		
6	High St./Cushing St.	◆	◆		
7	S. Branch Souhegan River		◆		◆
8	Brickford Field			◆	◆

Soil Functions for Resilience

	ASHBURNHAM
High Performance Soils & High Carbon Soils	21,170 ac (80.8%)
Moderate-Low Function Soils	3,450 ac (13.2%)
Degraded Soils with High Regeneration Potential	1,507 ac (5.7%)
Highly Degraded Soils	83 ac (0.3%)

Nature-based Solutions Opportunity Table Ashburnham: South Branch of Souhegan River

Value	BEST	BETTER	GOOD
Feasibility	high	mid	low
Ownership	Residential		

Best Value = An improvement to a resource that provides significant lasting resiliency and strengthens or serves related resources

Better Value = Makes significant improvements to resiliency with long lasting effect

Good Value= Improves the habitat value, or resiliency of a site or feature

Feasibility is based on property ownership or technical access

NbS Template#	Nature-based Solution Description	South Branch of Souhegan River
	Natural Environment Restructuring	
1	River / pond bank revegetation	
2	Grassland meadow management restoration	
4	Wetland management restoration	
5	New wetland or floodplain construction / expansion	**low**
7	Stream flow alteration	
8	Pollinator hedgerow buffer	**high**
10	Soil management or restoration**	**high***

This "Building Community Climate Resilience: Nashua River Watershed-wide Nature-based Solutions Plan" is funded by a Municipal Vulnerability Preparedness grant awarded to the City of Fitchburg by the Healey-Driscoll Administration's Municipal Vulnerability Preparedness (MVP) program, which is administered by the Executive Office of Energy and Environmental Affairs (EEA). NRWA was the lead coordinator for this project.
